ANCHOR EVIDENCE RECORD

Is this anchor doing its job?

One page, eight items. Tick what you have, note where it is, and say what it means. Use it for your own anchor, or to appraise someone else's.

I AM
- ☐ Documenting my own anchor
- ☐ Appraising someone else's

STUDY / DATA SOURCE	ANCHOR (AND TYPE)	TARGET COA	GROUPINGS ANALYSED

COMPLETED BY	DATE	THIS ANCHOR'S ROLE
		☐ Primary ☐ Supportive

PURPOSE An anchor sorts patients into distinct, interpretable change groups. Each row tests one part of that job.

ITEM	SHOWN	PARTLY	GAP	N/A	EVIDENCE AND WHERE IT IS	WHAT IT MEANS
1 CONSTRUCT LINKAGE *Does it measure the same thing as the COA?*						
1.1 **Conceptual alignment** Same domain, respondent, recall period and attributes? This is the gate.	☐	☐	☐	☐		
1.2 **Cross-sectional association** Anchor against COA at one time point: correlation and scatter plot.	☐	☐	☐	☐		
1.3 **Longitudinal association** Change correlation and scatter plot. Necessary, not sufficient.	☐	☐	☐	☐		
2 MEANINGFULNESS *Do its steps mean something to patients?*						
2.1 **Category interpretability** Debriefing and clinical input: options understood and distinct. PLAN IN PROTOCOL	☐	☐	☐	☐		
2.2 **Transition meaningfulness** Is each one-step move meaningful, across the scale and over time? PLAN IN PROTOCOL	☐	☐	☐	☐		
2.3 **Within-group coherence** Share saying "my change was meaningful" in each group. Look for the step. PLAN IN PROTOCOL	☐	☐	☐	☐		
3 DISCRIMINATION *Does it separate neighbouring groups?*						
3.1 **Response option discrimination** AUC for neighbouring options at one time point.	☐	☐	☐	☐		
3.2 **Grouping discrimination** AUC for neighbouring groups on change scores, with 95% CIs.	☐	☐	☐	☐		

The verdict

No cutoffs, by design. Set out the evidence; the reader judges it.

Groupings the evidence supports

Groupings it does not support

The one gap to close first

Confidence in the groupings

☐ High ☐ Moderate ☐ Low

Fit for this purpose?

☐ Yes ☐ With caveats ☐ No
